

# 2011 Subject Index

3M syndrome, .....	154	Left ventricular mass, .....	144
Adolescent .....	18, 95, 202	Levothyroxine, .....	192
Adolescent health, .....	43	Luteinizing hormone, .....	12
Adolescents, .....	77	Macrosomic newborns, .....	144
Anogenital distance, .....	122	McCune-Albright syndrome, .....	40
Aromatase inhibitor, .....	40	Measurement, .....	122
Autoimmune oophoritis, .....	212	Metabolic alkalosis, .....	101
Bartter syndrome, .....	101	Metabolic control, .....	202
Bisphosphonate, .....	40	Metabolic syndrome, .....	132, 198
Breastfed, .....	70	Monozygotic twins, .....	32
CAM, .....	139	Myasthenia gravis, .....	212
Cardiac autonomic function, .....	60	Neurological pathology, .....	208
Cardiovascular disease, .....	132	Newborn screening, .....	208
Central precocious puberty, .....	12	Newborn, .....	122
Chemokines, .....	115	Novel pathogenic DNA variation, .....	29
Childhood .....	18, 84	Obesity, .....	132
Childhood metabolic syndrome, .....	70	Oculocerebrorenal syndrome, .....	29
Childhood obesity, .....	60	Pediatric obesity, .....	115
Children and adolescents .....	179	Percentiles, .....	184
Children, .....	7, 51, 77, 89, 132, 179, 202	Pituitary, .....	65
Chronic autoimmune thyroiditis, .....	18	Pituitary hormone deficiency, .....	56
Classification, .....	77	Power spectral analysis, .....	60
Congenital adrenal hyperplasia, .....	208, 219	Pregnancy, .....	160
Congenital hyperthyroidism, .....	32, 208	Prevalence, .....	70
Cystinosis, .....	101	Prolactin, .....	65
Deafness, .....	36	Prolactinoma, .....	65
Diabetes, .....	36	Pseudohypoaldosteronism type 1, .....	98
Diabetic ketoacidosis, .....	149, 222	Pseudohypoaldosteronism, .....	219
DiGeorge syndrome, .....	95	Psychiatric problems, .....	95
Disorders of sex development, .....	77	Pubertal development, .....	1
Disproportionate short stature, .....	163	Puberty, .....	1, 65, 70
Ectopic neurohypophysis, .....	56	Radiology, .....	163
Effective plasma osmolality, .....	149	Reference values, .....	7
Endocrine disruptors, .....	1	Rehydration fluid, .....	149
Etiology, .....	77	Renal anomalies, .....	56
Exercise, .....	115	Respiratory pathology, .....	208
Exogenous corticosteroids, .....	160	Rickets, .....	7
Fetal adrenal suppression, .....	160	Risk factors, .....	70
Follicle stimulating hormone, .....	12	Rubinstein-Taybi syndrome, .....	32
Follow-up, .....	40, 216	Sex development disorders, .....	105
Gender assignment, .....	105	Short stature, .....	154
General paediatrics, .....	43	Skeletal dysplasia, .....	163
Genetic polymorphism .....	126	Slender bones, .....	154
GnRH analogue, .....	12	Sodium concentration, .....	149
GnRH stimulation test, .....	12	Subcutaneous fat necrosis, .....	216
Gonads, .....	105	T1DM, .....	115
Growth hormone deficiency, .....	84	Thiamine-responsive megaloblastic anaemia, .....	36
Growth hormone receptor, .....	126	Thymectomy, .....	212
Growth, .....	51	Thyroid autoantibodies, .....	192
Hashimoto's thyroiditis, .....	192	Thyroid hypoplasia, .....	32
HbA1c, .....	202	Thyroid, .....	51
Health services research, .....	43	Time-domain analysis, .....	60
Heart rate variability, .....	60	TITF1/NKX2-1 gene, .....	208
Height, .....	184	Toddler, .....	184
Herbal medicine, .....	139	Treatment, pitfalls, .....	98
Hodgkin disease, .....	89	TSH cut-off, .....	208
Human growth hormone, .....	126	Tuberculous meningitis, .....	222
Hypercalcemia, .....	216	Tumor necrosis factor- $\uparrow$ , .....	115
Hypothalamo-pituitary-gonadal axis, .....	12	Type 1 diabetes mellitus, .....	139, 222
IGF-1, .....	84	Type 1 diabetes, .....	179
IGFBP-3, .....	84	Vitamin D, .....	179, 198
Infant, .....	184	Weight, .....	184
Insulin resistance, .....	198		
Insulin-dependent diabetes mellitus, .....	202		
Interleukin-2, .....	115		
Interleukin-6, .....	115		
Intima-media thickness, .....	144		
Late effect, .....	89		
Left ventricular mass index, .....	132
